MISSOURI HIGHWAYS AND TRANSPORTATION COMMISSION

105 WEST CAPITOL
JEFFERSON CITY, MO 65102
1-888-ASK-MODOT (1-888-275-6636)

Example_plans_001_2020Front.dgn 3:36:15 PM 12/28/2020

These plans are to serve as an example only. They may not necessarily reflect current standards or practices. Contact Development Section with any questions or suggestions.

(59'-93'-59') PRESTRESSED CONCRETE I-GIRDER SPANS

This set of example plans is based on several bridge projects. It is intended to be used for reference only, covering a variety of structural components. Some details on the following sheets may not necessarily match what is shown on this front sheet.

Border is attached as a Reference File, using Place Border option under the MoDOT pull-down menu.

Border is attached as a Reference File, using Place Border option under the MoDOT pull-down menu.

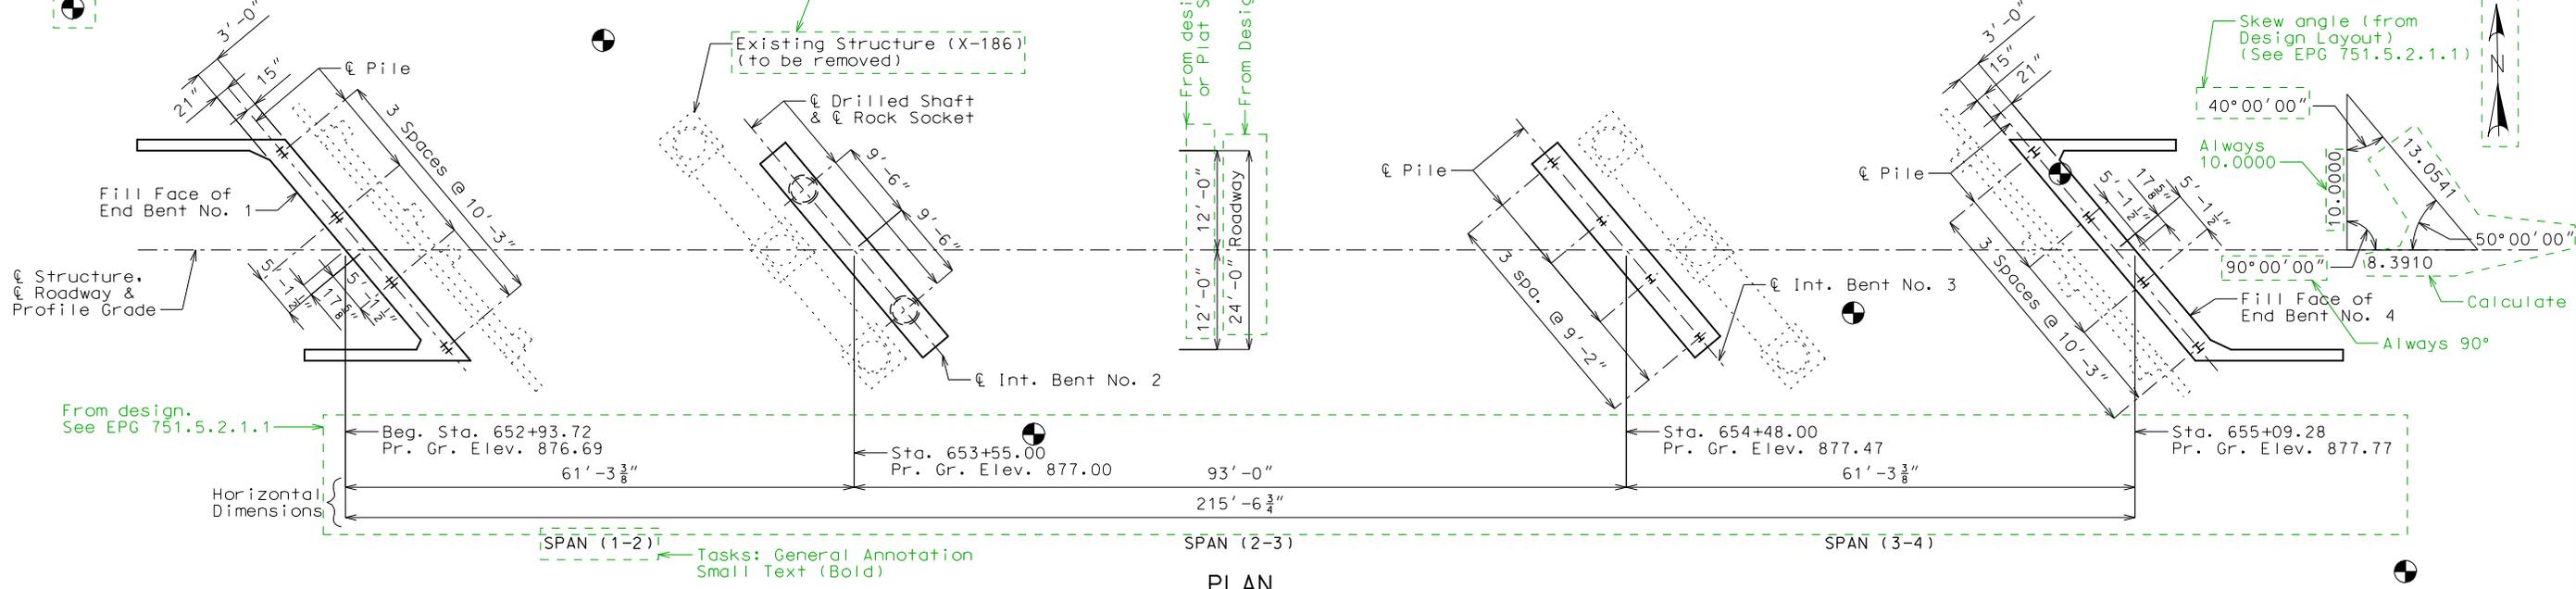

See EPG 751.5 for more information on front sheet details.

All note and dimension text shall be "small". (Use Tasks: General Annotation)

Old roadway fill under the ends of the bridge shall be removed as shown. Removal of old roadway fill will be considered completely covered by the contract unit price for roadway excavation.

Roadway fill shall be completed to the final roadway section and up to the elevation of the bottom of the concrete beam within the limits of the structure and for not less than 25 feet in back of the fill face of the end bents before any piles are driven for any bents falling within the embankment section.

Cell in Tasks: Front Sheets (Boring Symbol)

Front Sheet Text available as a cell in Tasks: General Annotation

Designed Aug. 2019
Detailed Aug. 2019
Checked Aug. 2019

Indicates location of borings.
Notice and Disclaimer Regarding Boring Log Data

The locations of all subsurface borings for this structure are shown on the plan sheet(s) for this structure. The boring data for all locations indicated, as well as any other boring logs or other factual records of subsurface data and investigations performed by the department for the design of the project, are shown on Sheet No. 30 and may be included in the Electronic Bridge Deliverables. They will also be available from the Project Contact upon written request. No greater significance or weight should be given to the boring data depicted on the plan sheets than is given to the subsurface data available from the district or elsewhere.

Cell in Tasks: Bridge Detailing Notes (E3.2 Notice and Disclaimer). If the note will not fit on this sheet, keep the "Indicates location of borings." portion and add a line stating "For Notice and Disclaimer Regarding Boring Log Data, see Sheet No. X."

The Commission does not represent or warrant that any such boring data accurately depicts the conditions to be encountered in constructing this project. A contractor assumes all risks it may encounter in basing its bid prices, time or schedule of performance on the boring data depicted here or those available from the district, or on any other documentation not expressly warranted, which the contractor may obtain from the Commission.

From Plat sheet in Layout folder. See EPG 751.5.2.1.3
B.M. 306 = SET "D" SQUARE CUT AT S.E. CORNER OF BRIDGE HEADWALL AT HORSE CREEK BRIDGE ON RTE. B. ELEV. 973.158

BRIDGE: ROUTE B OVER HORSE CREEK
ROUTE B FROM RTE. 71 TO RTE. 97 ABOUT 2.5 MILES WEST OF RTE. 97
BEG. STA. 652+93.72

Estimated Quantities

Item	Substr.	Superstr.	Total
Class 1 Excavation	cu. yard	80	80
Removal of Bridges (X-186)	lump sum		1
Drilled Shafts (3 ft. 6 in. Dia.)	linear foot	94	94
Rock Sockets (3 ft. 0 in. Dia.)	linear foot	32	32
Video Camera Inspection	each	4	4
Foundation Inspection Holes	linear foot	72	72
Sonic Logging Testing	each	4	4
Galvanized Structural Steel Piles (12 in.)	linear foot	196	196
Pile Point Reinforcement	each	8	8
Class B Concrete (Substructure)	cu. yard	70.4	70.4
Slab on Concrete I-Girder	sq. yard		635
Type D Barrier	linear foot		491
Type 6 (54 in.), Prestressed Concrete I-Girder	linear foot		632
Reinforcing Steel (Bridges)	pound	15,270	15,270
Steel Intermediate Diaphragm for P/S Concrete Girders	each		6
Slab Drain	each		36
Vertical Drain at End Bents	each		2
Plain Neoprene Bearing Pad	each		6
Laminated Neoprene Bearing Pad	each		12

All concrete above the construction joint in the end bents is included in the Estimated Quantities for Slab on Concrete I-Girder.

All reinforcement in the end bents is included in the Estimated Quantities for Slab on Concrete I-Girder.

All reinforcement in the intermediate bent concrete diaphragms except reinforcement embedded in the beam cap is included in the Estimated Quantities for Slab on Concrete I-Girder.

All concrete above the intermediate beam cap is included in the Estimated Quantities for Slab on Concrete I-Girder.

Notes B, EPG 751.50

$$\text{Minimum Nominal Axial Compressive Resistance} = \frac{\text{Maximum Factored Loads}}{\text{Resistance Factor}}$$

$$\text{Minimum Nominal Axial Compressive Resistance} = \frac{\text{Maximum Factored Loads}}{\text{Resistance Factors}}$$

Manufactured pile point reinforcement shall be used on all piles in this structure.

Sonic logging testing shall be performed on all drilled shafts and rock sockets.

Notes E2, EPG 751.50

General Notes:

Design Specifications:

2020 AASHTO LRFD Bridge Design Specifications (9th Ed.)
Seismic Performance Category, A ← From Design Layout.
If not specified, use "A"

Design Loading:

Vehicular = HL-93 ← From Design Layout
Future Wearing Surface = 35 lb/sf (Min.)
Earth = 120 lb/cf
Equivalent Fluid Pressure = 45 lb/cf
Superstructure: Simply-Supported, Non-Composite for dead load.
Continuous Composite for live load.

Design Unit Stresses:

Class B Concrete (Substructure) $f'c = 3,000$ psi
Class B-2 Concrete (Drilled Shafts & Rock Sockets) $f'c = 4,000$ psi
Class B-1 Concrete (Barrier) $f'c = 4,000$ psi
Class B-2 Concrete (Superstructure, except Prestressed Girders and Barrier) $f'c = 4,000$ psi
Reinforcing Steel (Grade 60) $fy = 60,000$ psi
Steel Pile (ASTM A709 Grade 50) $fy = 50,000$ psi
For precast prestressed panel stresses, see Sheet No. 18.
For prestressed girder stresses, see Sheets No. 14 & 15.

Neoprene Pads:

Neoprene bearing pads shall be 60 durometer and shall be in accordance with Sec 716.

Joint Filler:

All joint filler shall be in accordance with Sec 1057 for preformed sponge rubber expansion and partition joint filler, except as noted.

Reinforcing Steel:

Minimum clearance to reinforcing steel shall be 1 1/2", unless otherwise shown.

Traffic Handling:

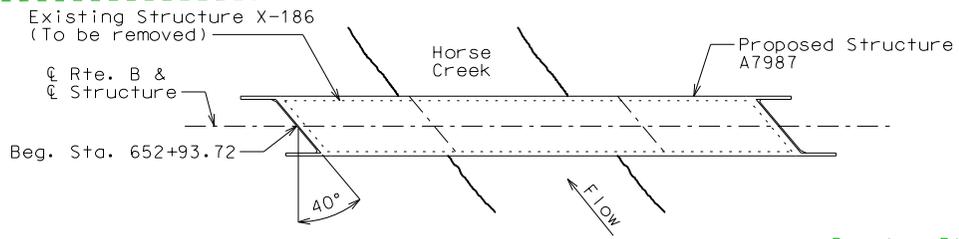

Structure to be closed during construction. Traffic to be maintained on other routes. See roadway plans for traffic control.

Miscellaneous:

MoDOT Construction personnel will indicate the type of joint filler option used under the precast panels for this structure:

- Constant Joint Filler
- Variable Joint Filler

Cell in Tasks: Bridge Detailing Notes (E2.1 Foundation Data) Info from design & Design Layout

Based on Plat sheet in Layout folder. See EPG 751.5.2.1.5

Estimated Quantities for Slab on Concrete I-Girder

Item	cu. yard	Total
Class B-2 Concrete		204
Reinforcing Steel (Epoxy Coated)	pound	49,540

Cell in Tasks: Bridge Detailing Notes (B3.21 "Estimated Quantities For")

Round to nearest 1 cubic yard (see EPG 751.50, notes after B3.21)

Notes B3c, EPG 751.50

The table of Estimated Quantities for represents the quantities used by the State in preparing the cost estimate for concrete slabs. The area of the concrete slab will be measured to the nearest square yard longitudinally from end of slab to end of slab and transversely from out to out of bridge slab (or with the horizontal dimensions as shown on the plan of slab). Payment for prestressed panels, conventional forms, all concrete and epoxy coated reinforcing steel will be considered completely covered by the contract unit price for the slab. Variations may be encountered in the estimated quantities but the variations cannot be used for an adjustment in the contract unit price.

Method of forming the slab shall be as shown on the plans and in accordance with Sec 703. All hardware for forming the slab to be left in place as a permanent part of the structure shall be coated in accordance with ASTM A123 or ASTM B633 with a thickness class SC 4 and a finish type I, II or III.

The Estimated Quantities for Slab on Concrete I-Girder are based on skewed precast prestressed end panels.

The prestressed panel quantities are not included in the table of Estimated Quantities for Slab on Concrete I-Girder.

Class B-2 Concrete quantity is based on minimum top flange thickness and minimum joint material thickness.

Cell in Tasks: Front Sheets (Hydrologic Data) See EPG 751.5.2.1.5 Info from Design Layout for stream crossing only.

Hydrologic Data

Drainage Area = 18 mi ²	
Design Flood Frequency = 50 years	
Design Flood Discharge = 5,700 cfs	
Design Flood (D.F.) Elevation = 354.4	
Base Flood (100-year)	
Base Flood Elevation = 354.8	
Base Flood Discharge = 6,700 cfs	
Estimated Backwater = 0.77 ft	
Average Velocity thru Opening = 5.7 ft/s	
Freeboard (50-year)	
Freeboard = 1.7 ft	
Roadway Overtopping	
Overtopping Flood Discharge = 3,700 cfs	
Overtopping Flood Frequency = 10 years	
Overtopping Flood Elevation = 354.1	

See EPG 751.50 for General Notes and Estimated Quantities notes. Notes marked with [MS Cell] in EPG are available as cells in Tasks: Bridge Detailing Notes.

"Notice and Disclaimer Regarding Boring Log Data" may be placed on this sheet if it would not fit on the front sheet. Add "For locations of borings, see Sheet No. 1"

THIS MEDIA SHOULD NOT BE CONSIDERED A CERTIFIED DOCUMENT.

ELEVATION OF END BENT

DETAIL A

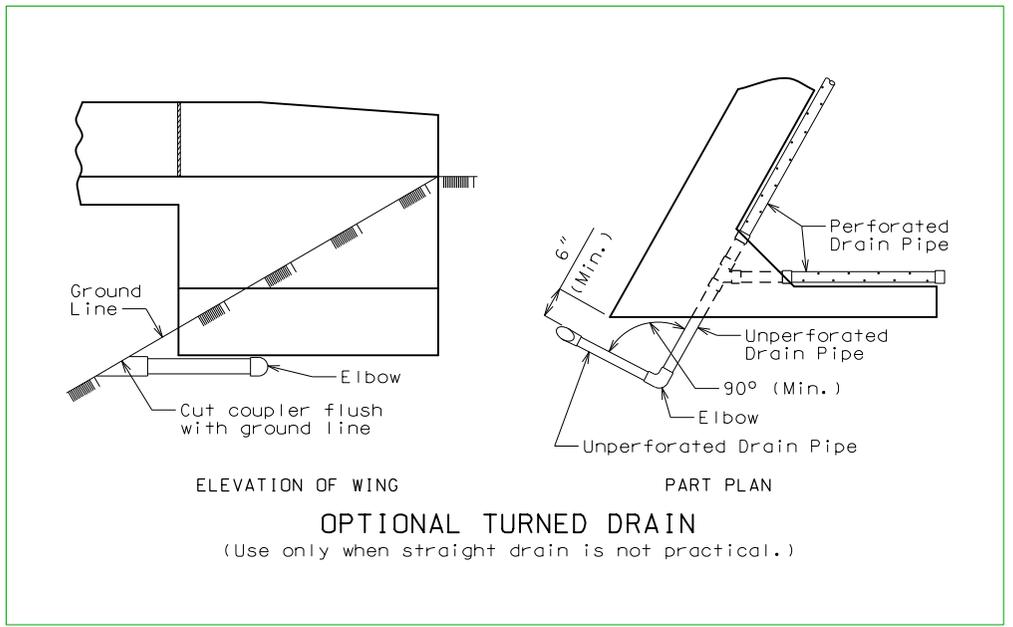

PLAN OF END BENT

PART SECTION A-A
(Section thru wing similar)

Use current standard sheet, found in ProjectWise under Bridge/A_BR_Std_Dwgs/Drains V_DRA-S_DRA/Current/V_DRA Open Read-only and Save As to your job's folder.

For end bents with intermediate wing, use Bridge Standard Drawing V_DRA03_midwing.

OPTIONAL TURNED DRAIN
(Use only when straight drain is not practical.)

SPM may prefer to remove this if it's not applicable. Needs to be included where rock may be present, or for situations where there is no side slope, such as for a drainage ditch.

VERTICAL DRAIN AT END BENTS
(Squared end bent shown, skewed end bent similar)

General Notes:

- All drain pipe shall be sloped 1 to 2 percent.
- Drain pipe may be either 6-inch diameter corrugated metallic-coated steel pipe underdrain, 4-inch diameter corrugated polyvinyl chloride (PVC) drain pipe, or 4-inch diameter corrugated polyethylene (PE) drain pipe.
- Drain pipe shall be placed at fill face of end bent and inside face of wings. The pipe shall slope to lowest grade of ground line, also missing the lower beam of end bent by a minimum of 1 1/2 inches.
- Perforated pipe shall be placed at fill face side and inside face of wings at the bottom of end bent and plain pipe shall be used where the vertical drain ends to the exit at ground line.

IF A SEAL IS PRESENT ON THIS SHEET IT HAS BEEN ELECTRONICALLY SEALED AND DATED.

General Notes:
Work this sheet with Sheets No. 11 & 12.
For location of Sections A-A, B-B & C-C and Elevations D-D & E-E, see Sheet No. 12.
For reinforcement of the safety barrier curb, see Sheet No. 24.

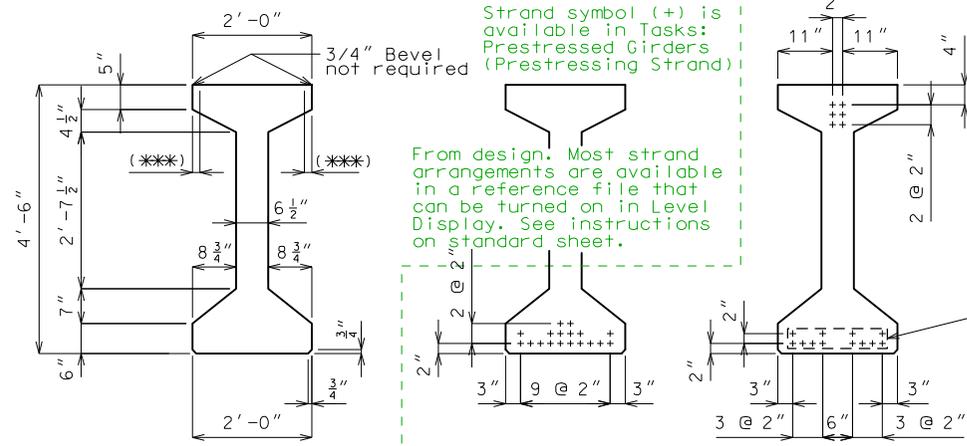

DETAILS OF END BENT NO. 4

Concrete for prestressed girders shall be Class A-1 with $f'c = 6000$ psi and $f'ci = 4500$ psi.

(+) indicates prestressing strand. From design 31 kips per strand

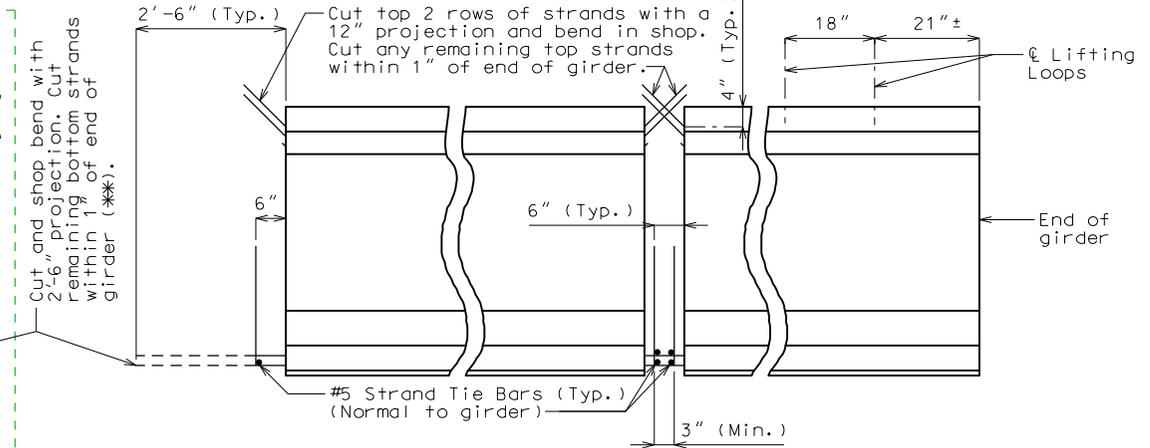

Use 18 strands with an initial prestress force of 558 kips.

Prestressing tendons shall be uncoated, seven-wire, low-relaxation strands, 1/2 inch diameter in accordance with AASHTO M 203, Grade 270. Pretensioned members shall be in accordance with Sec 1029.

** At the contractor's option the location for bent-up strands may be varied from that shown. The total number of bent-up strands shall not be changed. One strand tie bar is required for each layer of bent-up strands except at end bents which require one bar on the bottom layer of strands only. No additional payment will be made if additional strand tie bars are required.

*** At contractor's option a 3" to 3 1/4" smooth finish strip is permitted to facilitate placement of preformed fiber expansion joint material or expanded or extruded polystyrene bedding material for the prestressed panels.

Detailer calculates marked values.

BILL OF REINFORCING STEEL - EACH GIRDER table with columns for NO., SIZE & MARK, ACTUAL LENGTH, SHAPE, and BENDING DIAGRAM.

All dimensions are out to out.

Hooks and bends shall be in accordance with the CRSI Manual of Standard Practice for Detailing Reinforced Concrete Structures, Stirrup and Tie Dimensions.

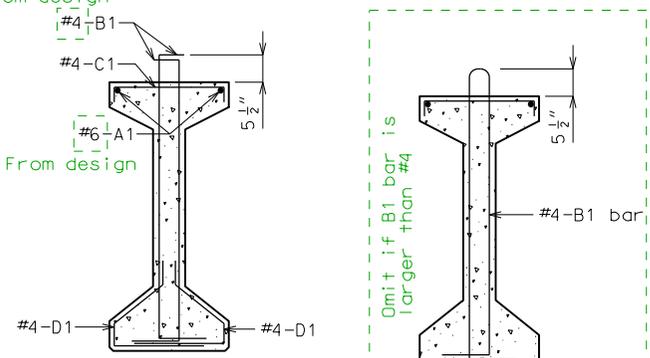

Actual lengths are measured along centerline of bar to the nearest inch.

Minimum clearance to reinforcing shall be 1".

All reinforcement shall be Grade 60.

The two D1 bars may be furnished as one bar at the fabricator's option.

All B1 bars shall be epoxy coated.

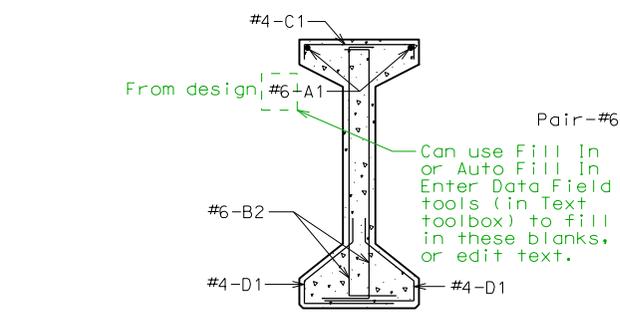

SECTION B-B Strands not shown for clarity.

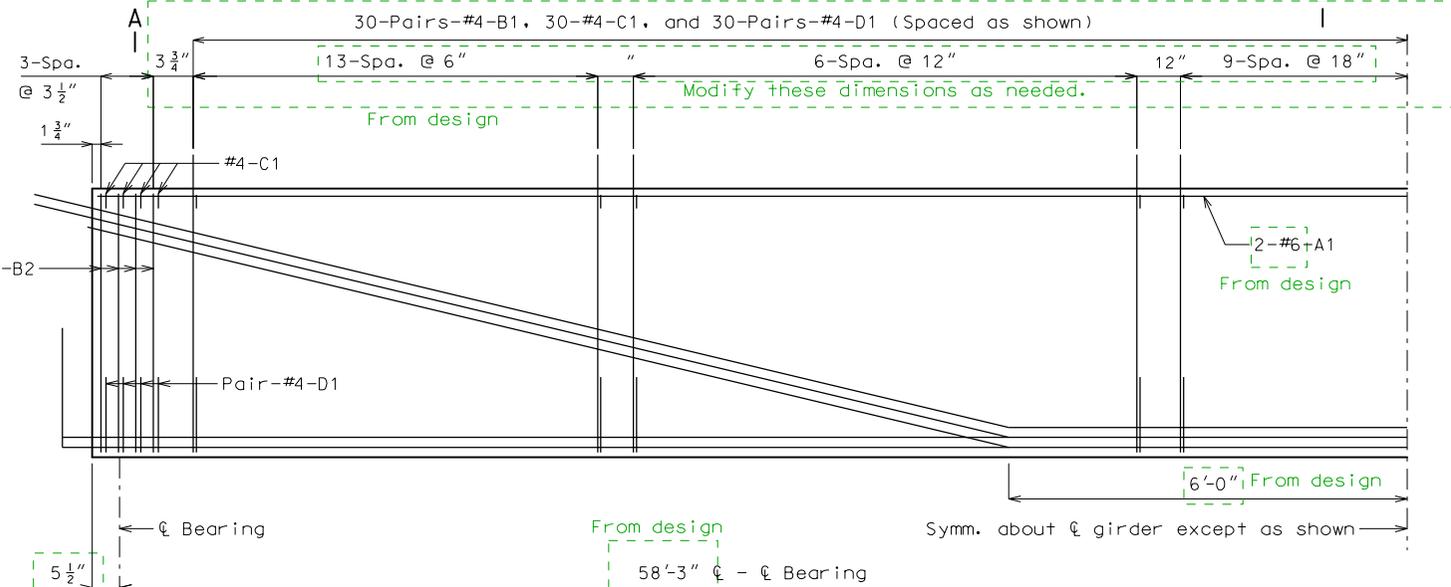

B1 BAR PERMISSIBLE ALTERNATE SHAPE

Use current standard sheet, found in ProjectWise under Bridge/A_Bridge_Standard_Drawings/PSI_Girders_PSI/Current/ (use appropriate girder type and size)

EPG 751.22 P/S Concrete I Girders

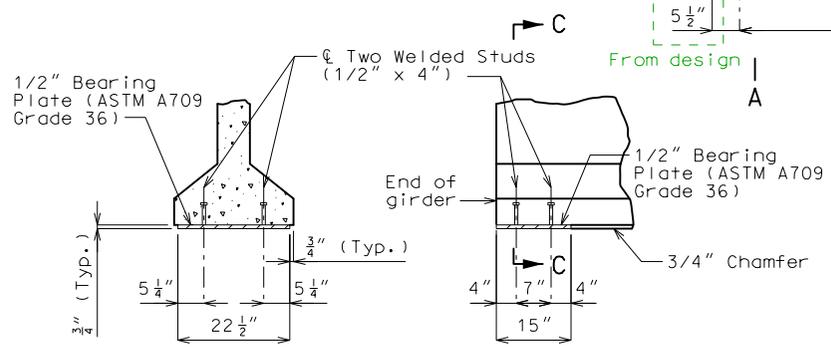

SECTION A-A Strands not shown for clarity.

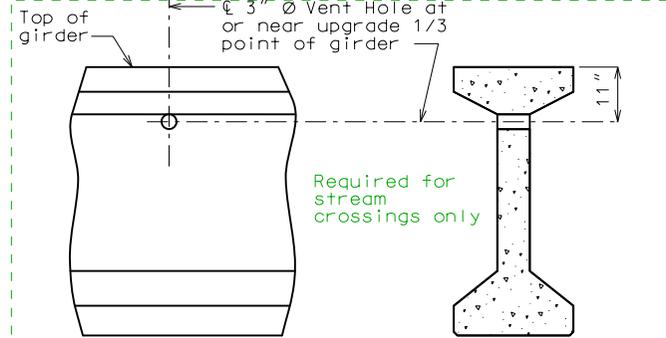

HALF ELEVATION OF GIRDER SPAN (- -)

Exterior and interior girders are the same, except for coil ties, and coil inserts for slab drains and holes for steel intermediate diaphragms.

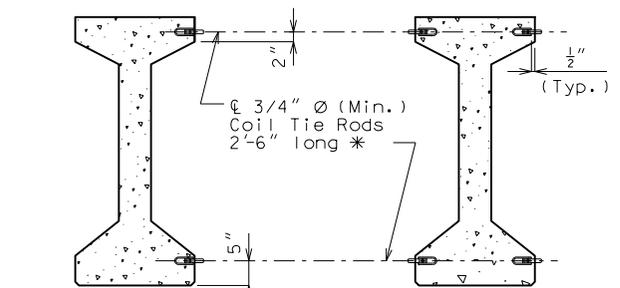

SECTION C-C BEARING PLATE DETAILS PART ELEVATION AT END OF GIRDER

Galvanize the 1/2" bearing plate (ASTM A709 Grade 36) in accordance with ASTM A123. Cost of furnishing, galvanizing, and installing the 1/2" bearing plate (ASTM A709 Grade 36) and welded studs in the prestressed girder will be considered completely covered by the contract unit price for Prestressed Concrete I-Girder.

PART ELEVATION OF GIRDER PART SECTION NEAR VENT HOLE

Place vent holes at or near upgrade 1/3 point of girders and clear reinforcing steel or strands by 1 1/2" minimum and steel intermediate diaphragm bolt connections by 6" minimum.

EXTERIOR GIRDERS AT INT. BENTS EXTERIOR GIRDERS AT END BENTS INTERIOR GIRDERS AT ALL BENTS

DETAILS OF COIL TIES

Cost of 3/4" Ø coil tie rods placed in diaphragms will be considered completely covered by the contract unit price for Prestressed Concrete I-Girder.

Coil ties shall be held in place in the forms by slotted wire-setting-studs projecting through forms. Studs are to be left in place or replaced with temporary plugs until girders are erected, then replaced by coil tie rods.

For location of coil inserts at slab drains, see Sheet No. []

For location of coil ties, see Sheets No. [] & []

The 1 1/2" Ø holes shall be cast in the web for steel intermediate diaphragms. Drilling is not allowed.

For details of diaphragms, see Sheet No. []

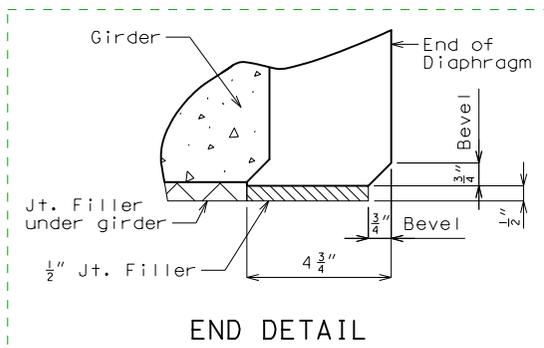

For Girder Camber Diagram, see Sheet No. []

* Length of coil tie rods at exterior girders at end bents = 2'-4"

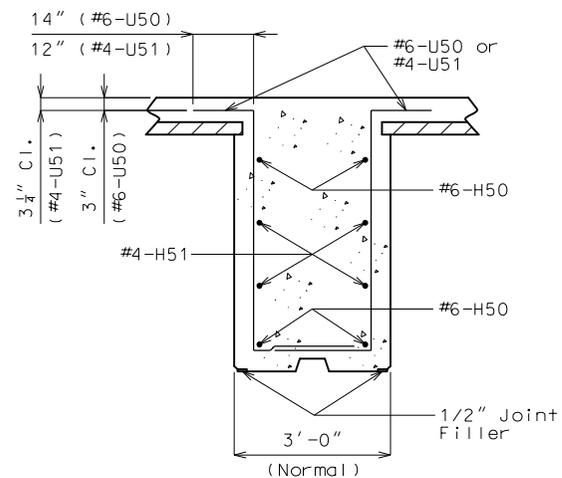

Omit if length is ≥ 2'-6" See EPG 751.22.3.14

CONCRETE DIAPHRAGMS AT INTERMEDIATE BENTS NO. 2 & 3

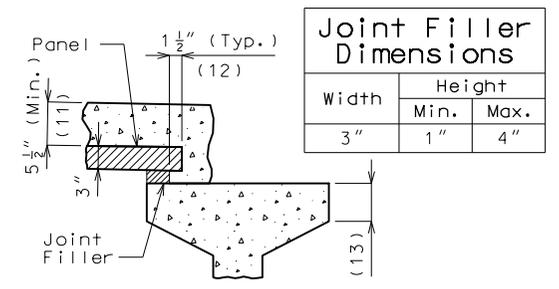

SQUARED END PANELS OR TRUNCATED END PANELS

PLAN SHOWING PANELS PLACEMENT

* #5-S Bars at abt. 9" cts. (1)
** #3-P1 at 12" cts. (End panels only)

SKWEDED END PANELS

SECTION A-A

Reference Notes:

- Plan of Panels Placement:
- (1) S-bars shown are bottom steel in slab between panels and used with squared and truncated end panels only.
 - (2) Extend S-bars 18 inches beyond the front face of end bents and int. bents for squared and truncated end panels only.
 - (3) Extend S-bars 9 inches beyond edge of girder (Typ.).
 - (4) End panels shall be dimensioned 1/2" min. to 1 1/2" max. from the inside face of diaphragm.
 - (5) For truncated end panels, use a min. of #5-S bars at 6" crossings in openings, or min. 4x4-W7xW7.
 - (6) For end panels only, P1 bars shall be 2'-0" in length and embedded 12". P1 bars will not be required for panels at squared integral end bents.
 - (7) #3-P2 bars near edge of panel at bottom (under strands).
 - (8) Use #3-P3 bars if panel is skewed 45° or greater.
 - (9) Any strand 2'-0" or shorter shall have a #4 reinforcing bar on each side of it, centered between strands. Strands 2'-0" or shorter may then be debonded at the fabricator's option.
 - (10) Optional 1/2" x 45° Chamfer one or both sides at bottom.
- Section A-A:
- (11) Slab thickness over prestressed panels varies due to girder camber. In order to maintain minimum slab thickness, it may be necessary to raise the grade uniformly throughout the structure. No payment will be made for additional labor or materials required for necessary grade adjustment.
 - (12) Contractor shall ensure proper consolidation under and between panels.
 - (13) At the contractor's option, the variation in slab thickness over prestressed panels may be eliminated or reduced by increasing and varying the girder top flange thickness. Dimensions shall be shown on the shop drawings.

General Notes:

Prestressed Panels:
Concrete for prestressed panels shall be Class A-1 with $f'c = 6,000$ psi, $f'ci = 4,000$ psi.

The top surface of all panels shall receive a scored finish with a depth of scoring of 1/8" perpendicular to the prestressing strands in the panels.

Prestressing tendons shall be high-tensile strength, uncoated, seven-wire, low-relaxation strands for prestressed concrete in accordance with AASHTO M 203 Grade 270, with nominal diameter of strand = 3/8" and nominal area = 0.085 sq. in. and minimum ultimate strength = 22.95 kips (270 ksi). Larger strands may be used with the same spacing and initial tension.

Initial prestressing force = 17.2 kips/strand.

The method and sequence of releasing the strands shall be shown on the shop drawings.

Suitable anchorage devices for lifting panels may be cast in panels, provided the devices are shown on the shop drawings and approved by the engineer. Panel lengths shall be determined by the contractor and shown on the shop drawings.

When squared end panels are used at skewed bents, the skewed portion shall be cast full depth. No separate payment will be made for additional concrete and reinforcing required.

Support from diaphragm forms is required under the optional skewed end until cast-in-place concrete has reached 3,000 psi compressive strength.

Prestressed panels shall be brought to saturated surface-dry (SSD) condition just prior to the deck pour. There shall be no free standing water on the panels or in the area to be cast.

The prestressed panel quantities are not included in the table of estimated quantities for the slab.

Reinforcing Steel:
All dimensions are out to out.

Hooks and bends shall be in accordance with the CRSI Manual of Standard Practice for Detailing Reinforced Concrete Structures, Stirrup and Tie Dimensions.

Minimum clearance to reinforcing steel shall be 1 1/2", unless otherwise shown.

If U1 bars interfere with placement of slab steel, U1 loops may be bent over, as necessary, to clear slab steel.

Deformed welded wire reinforcement (WWR) providing a minimum area of reinforcing perpendicular to strands of 0.22 sq in./ft, with spacing parallel to strands sufficient to ensure proper handling, may be used in lieu of the #3-P2 bars shown. Wire diameter shall not be larger than 0.375 inch. The above alternative reinforcement criteria may be used in lieu of the #3-P3 bars, when required, and placed over a width not less than 2 feet.

The following reinforcing steel shall be tied securely to the strands with the following maximum spacing in each direction:
#3-P2 bars at 16 inches.
WWR at 24 inches.

The #3-U1 bars shall be tied securely to #3-P2 bars, to WWR or to strands (when placed between P1 bars) at about 3-foot centers.

Minimum reinforcement steel length shall be 2'-0".

All reinforcement other than prestressing strands shall be epoxy coated.

Precast panels may be in contact with stirrup reinforcing in diaphragms.

S-bars are not listed in the bill of reinforcing.

Cost of S-bars will be considered completely covered by the contract unit price for the slab.

Joint Filler:
Joint filler shall be preformed fiber expansion joint material in accordance with Sec 1057 or expanded or extruded polystyrene bedding material in accordance with Sec 1073. Fill in

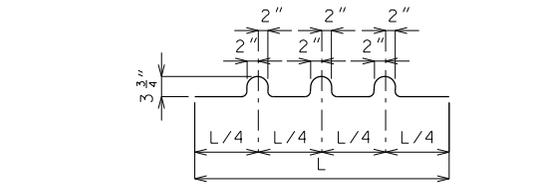

Use Slab Haunching Diagram on Sheet No. XX for determining thickness of joint filler within the limits noted in the table of Joint Filler Dimensions.

Thicker material may be used on one or both sides of the girder to reduce cast-in-place concrete thickness to within tolerances.

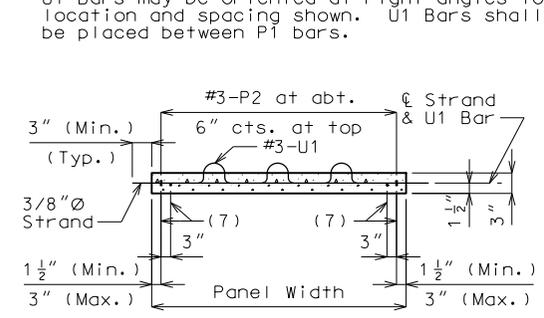

The same thickness of preformed fiber expansion joint material shall be used under any one edge of any panel except at locations where top flange thickness may be stepped. The maximum change in thickness between adjacent panels shall be 1/4 inch. The polystyrene bedding material may be cut with a transition to match haunch height above top of flange.

Joint filler shall be glued to the girder. When thickness exceeds 1 1/2 inches, the joint filler shall be glued top and bottom. The glue used shall be the type recommended by the joint filler manufacturer.

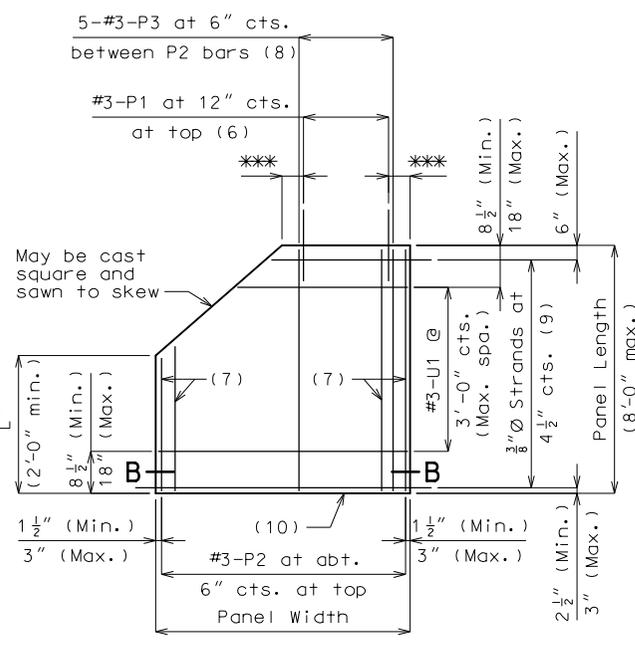

Edges of panels shall be uniformly seated on the joint filler before slab reinforcement is placed.

Use current standard sheet found in ProjectWise Bridge/A_BR_Std_Dwgs/Drains_V_DRA-S_DRA/Current/S_DRA (Use appropriate version for girder type)

EPG 751.10.3 Bridge Deck Drainage - Slab Drains

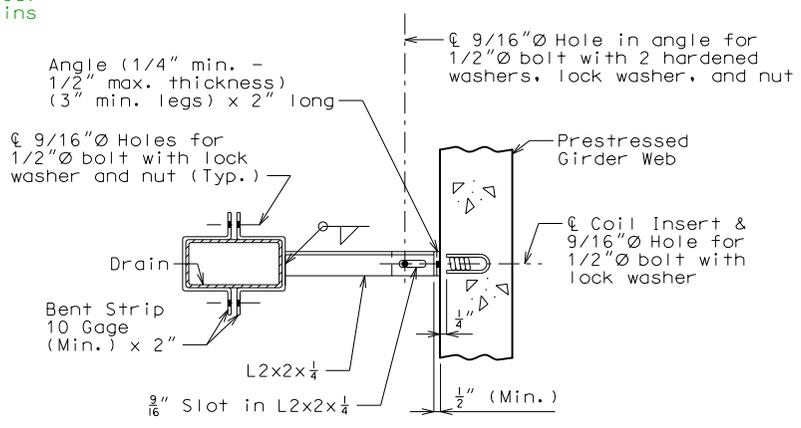

PLAN OF SLAB SHOWING SLAB DRAIN LOCATIONS

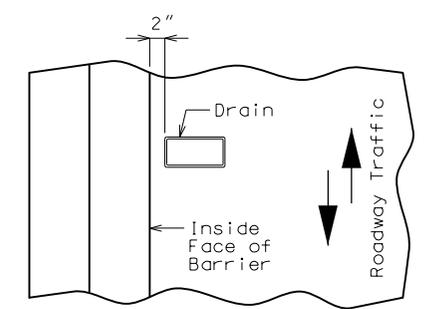

On Standard Drawing, Details of Drains Parallel to Roadway are drawn outside the border. If needed, use those in place of details for transverse drains shown in this example.

PART SECTION NEAR DRAIN

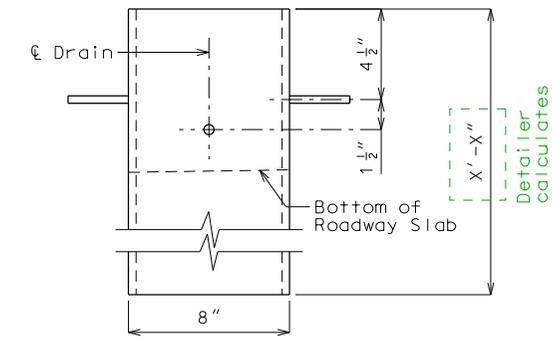

PART SECTION SHOWING BRACKET ASSEMBLY

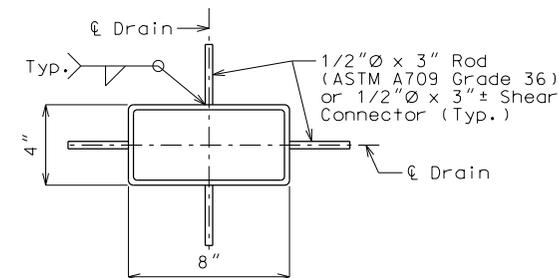

PART PLAN OF SLAB AT DRAIN

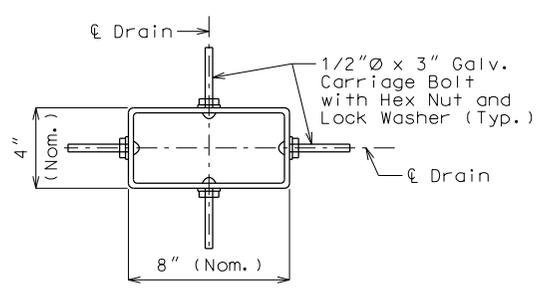

SLAB DRAINS

ELEVATION OF DRAIN

PLAN OF STEEL DRAIN OPTION

PLAN OF FRP DRAIN OPTION

General Notes:

Contractor shall have the option to construct either steel or FRP slab drains. All drains shall be of same type.

Slab drain bracket assembly shall be ASTM A709 Grade 36 steel.

Locate drains in slab by dimensions shown in Part Section Near Drain.

Reinforcing steel shall be shifted to clear drains.

The coil inserts and bracket assembly shall be galvanized in accordance with ASTM A123.

All bolts, hardened washers, lock washers and nuts shall be galvanized in accordance with ASTM A153.

Shop drawings will not be required for the slab drains and the bracket assembly.

The coil insert required for the bracket assembly attachment shall be located on the prestressed girder shop drawings.

Coil inserts shall have a concrete pull-out strength (ultimate load) of at least 2,500 pounds in 5,000 psi concrete.

The bolt required to attach the slab drain bracket assembly to the prestressed girder web shall be supplied by the prestressed girder fabricator.

Notes for Steel Drain:

Slab drains may be fabricated of either 1/4" welded sheets of ASTM A709 Grade 36 steel or from 1/4" structural steel tubing ASTM A500 or A501.

Outside dimensions of drains are 8" x 4".

The drains shall be galvanized in accordance with ASTM A123.

Notes for FRP Drain:

Drains shall be machine filament-wound thermosetting resin tubing meeting the requirements of ASTM D2996 with the following exceptions:

Shape of drains shall be rectangular with outside nominal dimensions of 8" x 4".

Minimum reinforced wall thickness shall be 1/4 inch.

The resin used shall be ultraviolet (UV) resistant and/or have UV inhibitors mixed throughout. Drains may have an exterior coating for additional UV resistance.

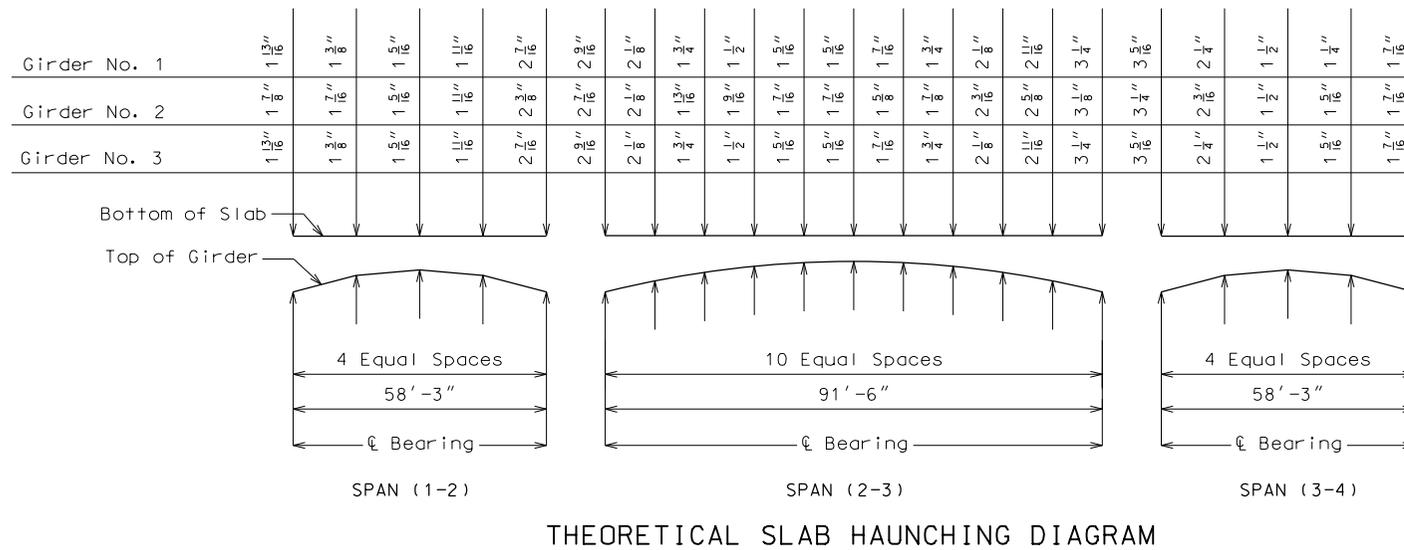

The color of the slab drain shall be gray (Federal Standard 26373). The color shall be uniform throughout the resin and any coating used.

The combination of materials used in the manufacture of the drains shall be tested for UV resistance in accordance with ASTM D4329 Cycle A. The representative material shall withstand at least 500 hours of testing with only minor discoloration and without any physical deterioration. The contractor shall furnish the results of the required ultraviolet testing prior to acceptance of the slab drains.

At the contractor's option, drains may be field cut. The method of cutting FRP slab drain shall be as recommended by the manufacturer to ensure a smooth, chip free cut.

EPG 751.10.1.7.2 Standard Partial Depth Precast Prestressed Panel Bridge Deck...

- General Notes:**
- Note H11.8 (EPG 751.50) Longitudinal slab dimensions are measured horizontally.
 - For Section Thru Slab and Slab Pouring Sequence, see Sheet No. 22.
 - For Details and Reinforcement of Safety Barrier Curb not shown, see Sheets No. 23, 24 & 25.
 - For Theoretical Slab Haunching Diagram, see Sheet No. 20.
 - For Details of Precast Prestressed Panels, see Sheet No. 18.
 - For Theoretical Bottom of Slab Elevations, see Sheet No. 20.
 - For details and locations of Slab Drains, see Sheet No. 19.

PLAN OF SLAB SHOWING REINFORCEMENT

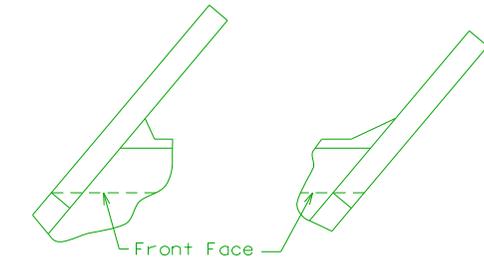

Use current standard sheet found in ProjectWise Bridge/A_BR_Std_Dwgs/Barriers BAR-BAC
 (Use appropriate version for barrier type, noted on Bridge Memo or Design Layout)

Drawn by detailer

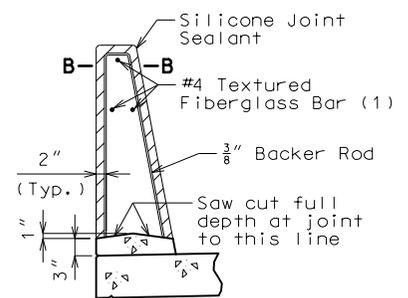

ELEVATION OF BARRIER
 (Left barrier shown, right barrier similar)
 Longitudinal dimensions are horizontal.

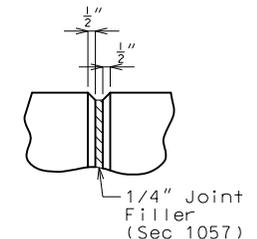

If left and right barriers are different (such as on a curved bridge), two elevations will be needed.

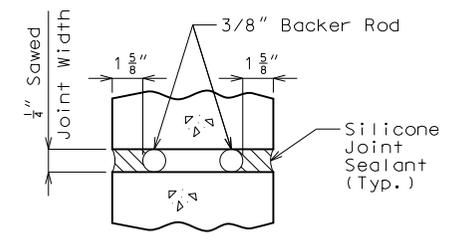

Guidance and additional or alternate details are available outside the border of the standard drawing.

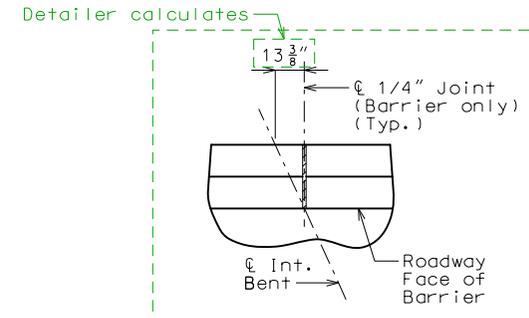

SECTION THRU SAW CUT JOINT

PART ELEVATION AT FORMED JOINT

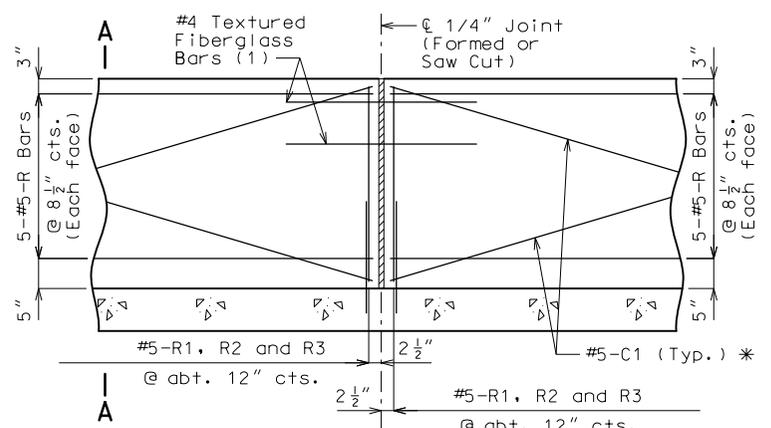

SECTION B-B

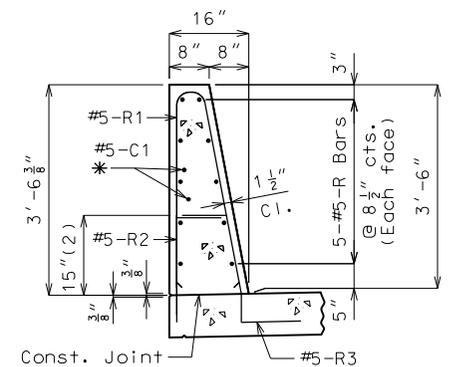

PART PLAN SHOWING JOINT LOCATION

This detail is available outside the border, for LA and RA bridges. Detail not required for squared bridges.

PART ELEVATION OF BARRIER

(1) Four feet long, centered on joint, slip-formed option only

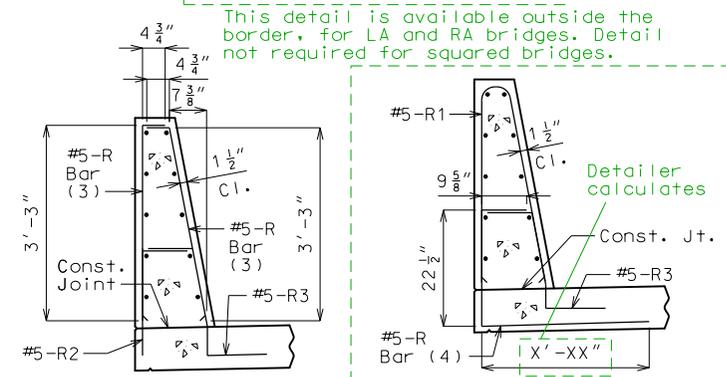

SECTION A-A

Use a minimum lap of 3'-1" for #5 horizontal barrier bars.

The cross-sectional area above the slab is 3.52 square feet.

(2) To top of bar

R-BAR PERMISSIBLE ALTERNATE SHAPE

- (3) The R1 bar may be separated into two bars as shown, at the contractor's option, only when slip forming is not used. (All dimensions are out to out.)
- (4) The R2 bar and #5 bottom transverse slab bar in cantilever (prestressed panels only) combination may be furnished as one bar as shown, at the contractor's option.

Remove if precast panels are not used in the slab.

General Notes:

- * Slip-formed option only.
- Conventional forming or slip forming may be used. Saw cut joints may be used with conventional forming.
- Top of barrier shall be built parallel to grade and barrier joints (except at end bents) normal to grade.
- All exposed edges of barrier shall have either a 1/2-inch radius or a 3/8-inch bevel, unless otherwise noted.

Payment for all concrete and reinforcement, complete in place, will be considered completely covered by the contract unit price for Type D Barrier per linear foot.

Concrete in barrier shall be Class B-1.

Measurement of barrier is to the nearest linear foot for each structure, measured along the outside top of slab from end of wing to end of wing.

Concrete traffic barrier delineators shall be placed on top of the barrier as shown on Missouri Standard Plan 617.10 and in accordance with Sec 617. Delineators on bridges with two-lane, two-way traffic shall have retroreflective sheeting on both sides. Concrete traffic barrier delineators will be considered completely covered by the contract unit price for Type D Barrier.

Joint sealant and backer rods shall be in accordance with Sec 717 for silicone joint sealant for saw cut and formed joints.

For slip-formed option, both sides of barrier shall have a vertically broomed finish and the top shall have a transversely broomed finish.

Plastic waterstop shall not be used with saw cut joints.

Notes For Concrete Slab Only:

All concrete for the bridge approach slab shall be in accordance with Sec 503 (f'c = 4,000 psi).

The reinforcing steel in the bridge approach slab shall be epoxy coated Grade 60 with fy = 60,000 psi.

Longitudinal construction joints in bridge approach slab shall be aligned with longitudinal construction joints in bridge slab.

Minimum clearance to reinforcing steel shall be 1 1/2", unless otherwise shown.

The reinforcing steel in the bridge approach slab shall be continuous. The transverse reinforcing steel may be made continuous by lap splicing the #4 bars 23" or by mechanical bar splice.

Mechanical bar splices shall be in accordance with Sec 710.

All joint filler shall be in accordance with Sec 1057 for preformed fiber expansion joint filler except as noted.

Payment for furnishing all materials, labor and excavation necessary to construct the concrete bridge approach slab, including the timber header, underdrain, Type 5 aggregate base, joint filler, and all other appurtenances and incidental work as shown on this sheet, complete in place, will be considered completely covered by the contract unit price for Bridge Approach Slab (Minor Road) per square yard.

See Missouri Standard Plans Drawing 609.00 for details of Type A Curb.

* Seal joint between vertical face of bridge approach slab and wing with "Silicone Joint Sealant for Saw Cut and Formed Joints" in accordance with Sec 717.

General Notes:

Contractor shall have the option to construct either slab except as noted.

The contractor shall pour and satisfactorily finish the bridge slab before placing the bridge approach slab.

Drain pipe may be either 6" diameter corrugated metallic-coated pipe underdrain, 4" diameter corrugated polyvinyl chloride (PVC) drain pipe, or 4" diameter corrugated polyethylene (PE) drain pipe.

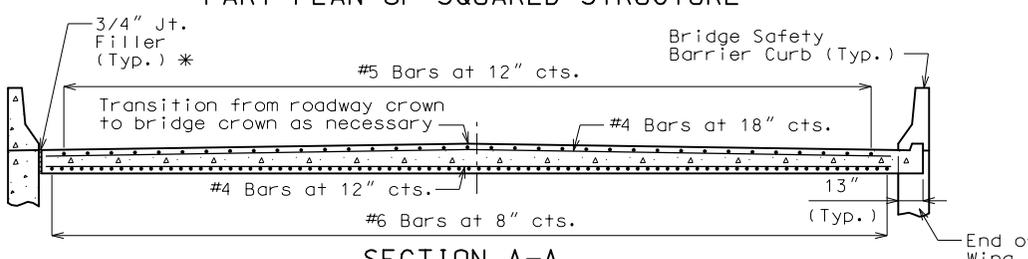

MoDOT Construction personnel will indicate the bridge approach slab used for this structure:

Concrete Bridge Approach Slab
 Asphalt Bridge Approach Slab

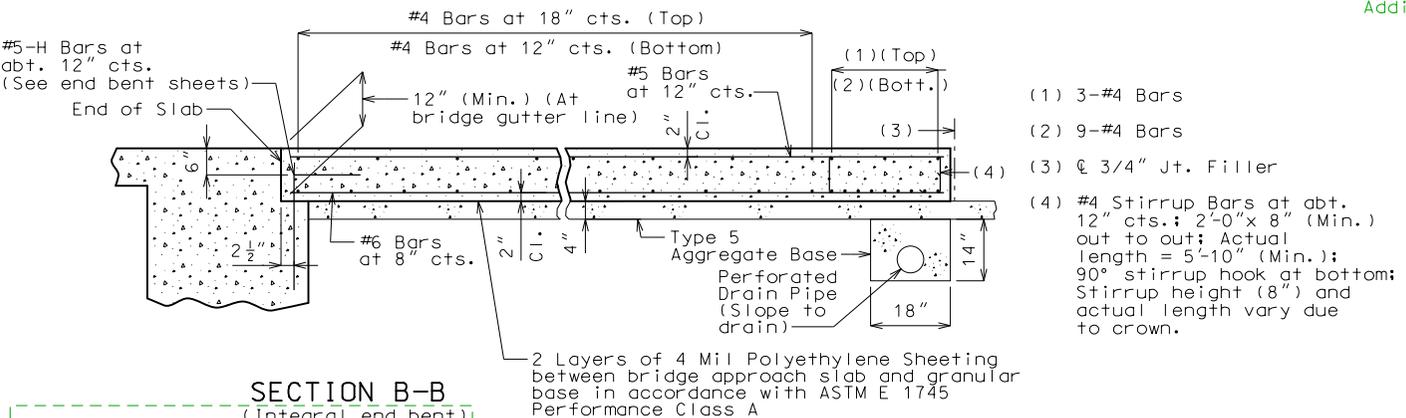

Notes For Asphalt Slab Only:

Payment for furnishing all materials, labor and excavation necessary to construct the asphalt bridge approach slab, including tack, curb, underdrain and Type 5 aggregate base within the pay limits shown, complete in place, will be considered completely covered by the contract unit price for Bridge Approach Slab (Minor Road) per square yard.

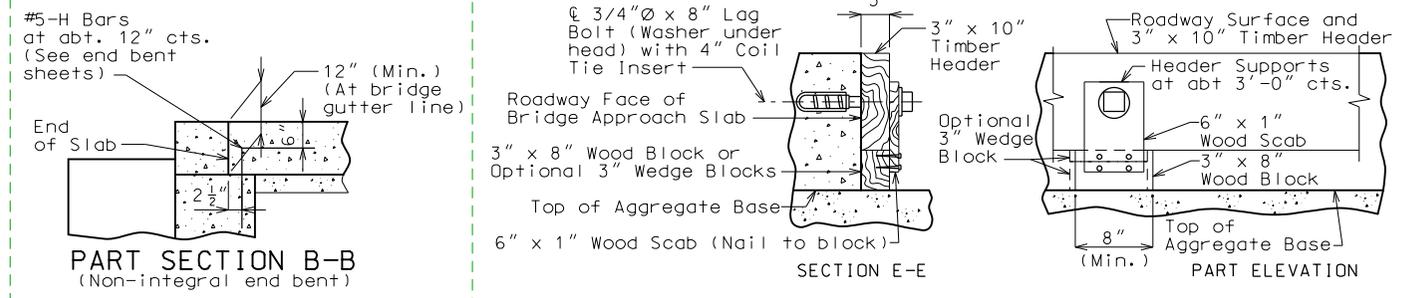

Application of tack is required between lifts per Sec 403.

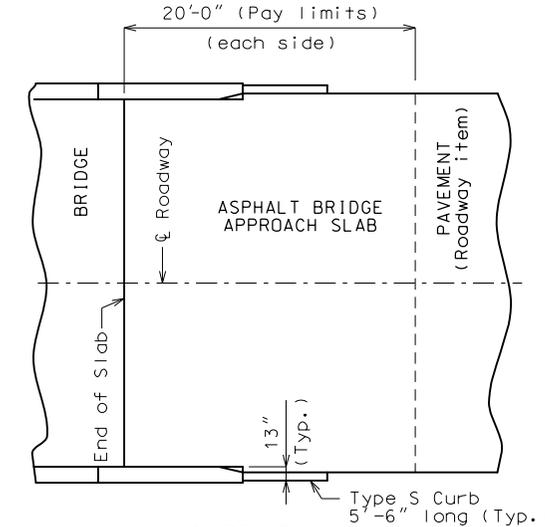

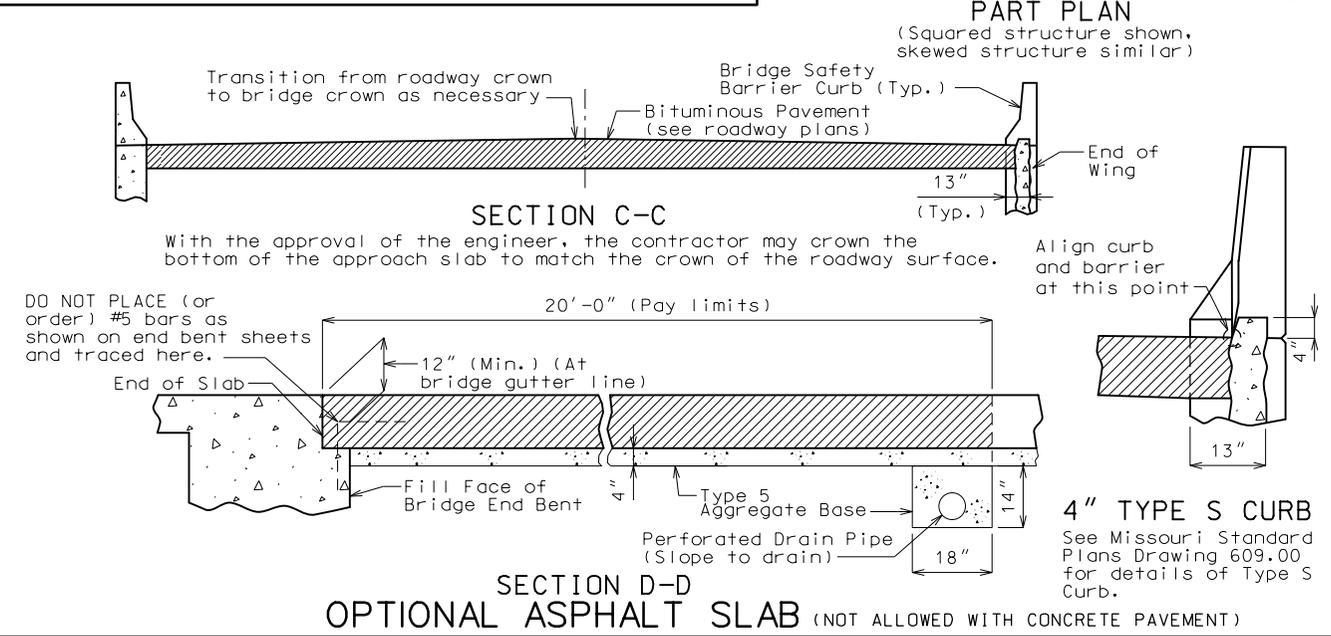

With the approval of the engineer, the contractor may crown the bottom of the approach slab to match the crown of the roadway surface.

Additional guidance shown outside std dwg border.

DETAILS OF TIMBER HEADER
 Remove timber header when concrete pavement is placed.

13			

As-Built Drilled Shaft Data				
Shaft No.	Top of Sound Rock (Elev.)	Tip of Casing (Elev.)	Bottom of Rock Socket (Elev.)	Remarks
Intermediate Bent No. 2				
1				
2				

Note:
 Indicate in remarks column:
 A. Pile type and grade
 B. Batter
 C. Driven to practical refusal.
 This sheet to be completed by MoDOT construction personnel.
